

Adjustable Automatic Blood Donor Scale

Model 368

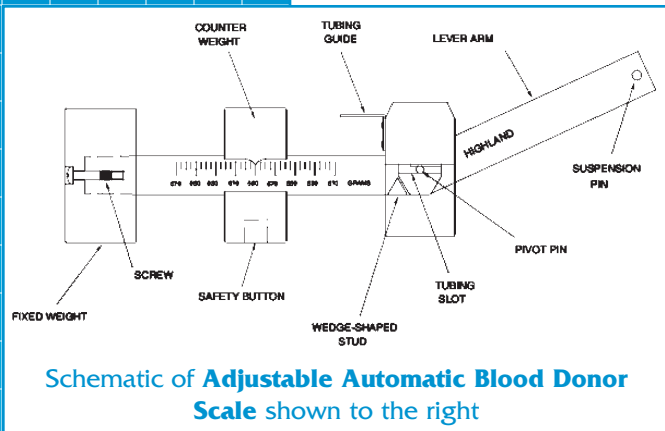

To be used with blood collection containers for weighing whole blood during collection.

The **Adjustable Automatic Blood Donor Scale Model 368** is specifically designed to clamp off donor tubing when the desired blood volume has been collected during the collection process. Its simple mechanical design requires no batteries or outside power source.

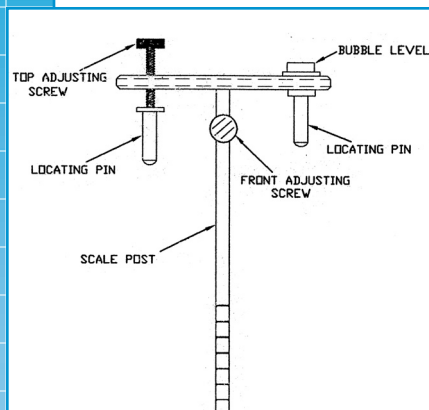

Highland Labs' designs have helped hospital personnel prevent the spread of infection since 1953. Each system is engineered for long life and trouble-free service.

The scale is designed, engineered, and manufactured in the U.S.A. by **Highland Labs, Inc.**

The **Blood Donor Scale Support Post** shown above left is designed to be used in conjunction with the Adjustable Automatic Blood Donor Scale Model 368. The support post is also available from **Highland Labs, Inc.**
